

Special Price on a Visio 300 Vision System

Demonstration Unit at 25% off

Cincinnati Precision Instruments is offering one unit at a special price of **\$30,000** with the latest PC-DMIS version software.

The TESA-VISIO provides a measuring table that accommodates parts up to 300 mm x 200 mm in size (X-Y) and 150 mm measuring range in the Z axis. The coordinate stages along with the vertical axis are displaced by means of DC Servomotors and are user controlled by a joystick. This allows the user to easily locate geometric features and provides for automatic motor driven execution of software driven part application programs. The TESA-VISIO's high-resolution camera and excellent optics deliver accuracy for demanding metrology application. The TESA-VISIO system utilizes the same PC-DMIS software as B&S CMM.

Some Key Features in PC-DMIS Vision Software:

- Point and click programming.
- Automatic edge detection.
- Importation and use of CAD files (various formats).
- Off-line programming.
- Reverse engineering together with export option in CAD format.
